

Digging, moving dirt, or improving a backyard? Choose equipment by the task, ground conditions, and access. We help DFW homeowners and contractors compare options for their projects.

Where can I rent earth moving equipment?

Rental Stop serves DFW through our Grand Prairie and Arlington locations. We offer loaders, excavators, backhoes, trenchers, and attachments. Share your task, materials, access measurements, and dates.

What is a skid steer used for?

A skid steer moves and spreads soil, gravel, and mulch. Wheels may suit firm ground; tracks distribute weight over a larger area. Turning can disturb surfaces. Choose by ground conditions and access.

What is an articulating wheeled loader?

These compact loaders steer through an articulated frame. Our small and large models move soil, mulch, gravel, and pallets with compatible attachments. The large model offers greater lifting height. Compare access, load requirements, and rated capacity.

Why rent a mini excavator?

A mini excavator uses a digging arm for focused excavation, such as drainage trenches and planting holes. Choose by digging depth, bucket width, reach, and operating clearance. Allow room to place excavated soil.

What works in a small backyard?

Consider a mini skid steer for moving materials or a baby excavator for digging. Measure gates, pathways, overhead clearance, and turning space. Confirm machine dimensions and room to work inside the yard.

Do I need a backhoe or a trencher?

A backhoe with loader combines digging and moving material. A trencher cuts narrow trenches. Choose by excavation depth and width, soil conditions, and operating room.

Which attachments can I rent?

Augers drill holes; forks move pallets; cutters and mower decks cut rated vegetation; breakers break concrete. Mini attachments include buckets, forks, and grapples. Confirm fit, hydraulics, and lifting capacity.

How much does equipment rental cost?

Compare machine, duration, attachments, and transport. Check our Earth Moving Equipment Rates and request a current quote including taxes, fees, fuel, damage waiver options, and metered hours.

Can equipment be delivered?

Yes. We offer large equipment delivery in DFW. Confirm timing, charges, unloading space, and site access. For self-transport, match loaded weight to the trailer, hitch, and tow vehicle ratings.

What should I do before digging?

Contact Texas811 at least two business days ahead, excluding weekends and holidays. Wait and confirm utility responses. Private lines may need separate locating. Respect markings and follow safe digging and equipment instructions.
